Hi there, my name is Chase Allbee. I'm a frontend developer from California who is eager to relocate to Seattle. My personal expertise stems from bringing a design to life with technical finesse.

I have a proven track record of being able to execute complex frontend builds for large clients. That said I'm always looking for new ways to keep up on the frontend world.

Technical Skills

Tooling - Workflow

Git, Gulp, Npm, Sublime Text, Bitbucket, Sketch, Illustrator, Photoshop, Pixate, Invision.

Development Technologies

HTML, CSS / SASS, Javascript, Wordpress, React, Bootstrap, Materialize.

Dev - Design Experiences

Responsive Design, Mobile UI Development, Javascript Game Development, Wordpress ACF

Notable Projects

Ettores Bakery - Three29

Led a Wordpress build based custom theme for a large bakery based in Sacramento. The website pulls information from Square and is integrated with a custom ecommerce backend also built by Three29.

Mitsubishi - Three29

Spearheaded the build on a Wordpress theme for Mitsubishi Chemical Carbon Fiber and Composites. My role was to ensure that the build was consistent with the design and also allow the client to customize a significant amount of the site even after the build was handed off. This meant using Advanced Custom Fields to allow the user to input data without effecting the design.

Safe Credit Union - Three29

Built a full site out for Safe Credit Union, one of the largest Credit Unions in California. My role was to build out the entire site for Safe Credit Union to integrate as templates with their own CMS. Leveraged Gulp to build Sass files so that the stylesheet that was as modular as possible.

Education

UC Santa Cruz

B.S. Computer Science - The program at UCSC emphasized not only core computer science but also UX / UI methodologies and experience programming with computer game design
